We are initiating coverage of Ascendas India Trust ("AIT" or the "Company") with a BUY rating and a S\$1.75 12M price target.

FY19 Earnings Highlights

- Net property income of S\$113.4m in FY19, an increase of 13% y-o-y from S\$100.4m in FY18. Stronger performance is attributed to the completed development of Anchor building at International Tech Park Bangalore (ITPB) and positive rental reversion from aVance Pune.
- Distribution per stapled security of S\$6.45 cents, representing an increase of 15% from S\$5.63 cents in FY18.
- Low aggregate leverage maintained, with a gearing level of 28% - below the self-imposed borrowing limit of 45%, allowing for debt headroom to pursue growth opportunities.
- Revised government regulations have increased development potential at ITPB from 2.7 million to 3.8 million square feet where construction is ongoing with completion expected by 2H20.
- Pipeline of developments in MTB 5 Bangalore and The V "Phase 1" redevelopments ongoing are expected to be completed in 2021.
- Committed pipeline of forward purchase agreements for BlueRidge 3 and Arshiya's 7th warehouse has increased assets under management ("AUM") from S\$1.9b in 3Q19 to S\$2.1b in 4Q19.

Investment Thesis

- Strategic expansion** into modern warehousing and logistics in key Indian cities supported by a well-developed pipeline of properties to capitalize on structural shift from old to modern warehousing.
- Favourable presence in India's Special Economic Zones provide structural economic moat.** Further supported by government policy of restricting zone supply pipeline.
- Robust pipeline of developments and redevelopment plans** to drive positive rental reversion, providing a visible income stream.

Catalysts

- Success of India's "Phase 4" reopening to allow offices to remain open past 31 May 2020.
- Effective Covid-19 control measures implemented to ensure that pipeline projects are completed as scheduled.
- Accretive acquisitions of suitable properties facing downward revaluations in 2Q20, driving AIT's strong recovery post Covid-19.

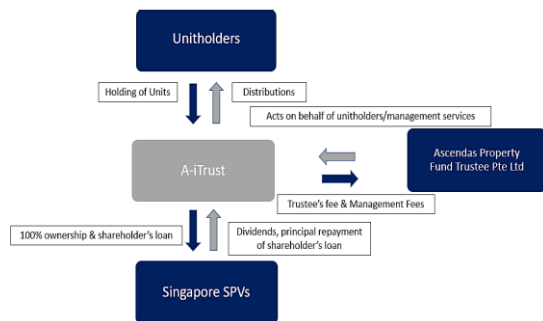

Valuations

Our 12M price target at the date of coverage is **S\$1.75**. Using an assumed payout ratio of 90%, a DDM model was used to derive the valuation. Our target price falls within the relative valuations of AIT's competitors as well as street estimates of S\$1.25 – S\$1.85. The 1Y historical yield spread between AIT and 10 years SGS of 3.28% is higher than the 1-year lookback SGS mean of 2.08% and presents an attractive risk reward profile at its current price.

Investment Risks

- Refinancing risk:** Widening credit spread and drying liquidity markets. Cushioned by weighted average debt maturity of 2.8 years.
- FX fluctuations:** High FX exposure to India and any weakening of INR may impact earnings. Forward contracts utilized to mitigate risk.
- Economic downturn in India:** Delaying of projects and reducing demand for office space, mitigated with clear management goals.
- Tenant concentration risk:** Reduced via diversification of tenant industries as well as sub-tenants to maintain an optimal tenant mix.

Company Overview

AIT is the first Indian property trust in Asia, established with the principal objective of owning and developing income-producing real estates used primarily as business space in India. It is managed by Ascendas Services (India) Pte Ltd, a wholly owned subsidiary of CapitaLand Limited. CapitaLand stands amongst Asia's largest diversified real estate groups with a presence in over 30 countries and an AUM of S\$131.9b as of 3Q19. CapitaLand has granted AIT with the Rights of First Refusal (ROFR) to acquire income-producing properties from Ascendas Land International Pte Ltd and Ascendas India Development Trust, a real estate fund which owns land in Gurgaon, Chennai and Coimbatore. AIT also acquire buildings from 3rd party vendors through prior agreements that grant AIT with ROFR.

Currently, AIT owns seven IT parks and one logistics park in India with a combined value of S\$1.9b as of 31 March 2020. AIT seeks to capitalize on growing IT and logistics demand in India by investing in IT parks, office properties and warehouses in key Indian cities such as Mumbai, Pune, Chennai, Hyderabad and Bangalore offering 13.1 million square feet of leasable space. AIT has yet to dispose of any properties as they are strategically located coupled with its low gearings that provide AIT with a significant debt headroom to acquire new buildings. Quality, reliable business space serves to differentiate and enables AIT to attract and retain prominent tenants such as Bank of America, DHL Logistics and Huawei Telecommunications that commit to an average lease term of 6.7 years which fosters a stable income profile. Moreover, healthy development and acquisition pipelines alongside prudent capital management supports stable, sustained growth. A total of 6.83 million square feet of potential floor area is currently under construction, with 2.29 million square feet (33.5%) slated to be completed in 2H20. This will result in a total of 19.9 million square feet of net leasable area once the constructions are completed.

As at 31 Dec 2019, AIT's tenant base comprises 344 tenants across a multitude of industries: IT Software & Application Development and Service Support (51%), Banking & Financial Services (11%), Design, Gaming and Media (7%), Logistics (7%) etc. With multinational companies comprising 86% of all tenants, AIT is well-hedged against regional shocks. AIT's top tenant accounts for only 8% of base rent while its top 10 tenants account for only 36% of total base rent, mitigating revenue concentration risk. In November 2019, AIT completed a round of private placement equity fund-raising at an offer price of S\$1.51 with 99.4 million new units issued, bringing the number of total shares post issuance to 1.14 billion. The management has indicated that the equity issuance will shore up business funding and boost trading liquidity. Approximately S\$150m was raised with the majority of proceeds used to partially finance the initial upfront funding of "Phase 1" of a potential investment. Net proceeds have also been used to repay existing loans, bringing gearing ratio down from 33% to 28%. Additionally, debt headroom has also increased from S\$514m to S\$802m, which may be used to further shore up financing and business funding.

FY19 Earnings Review

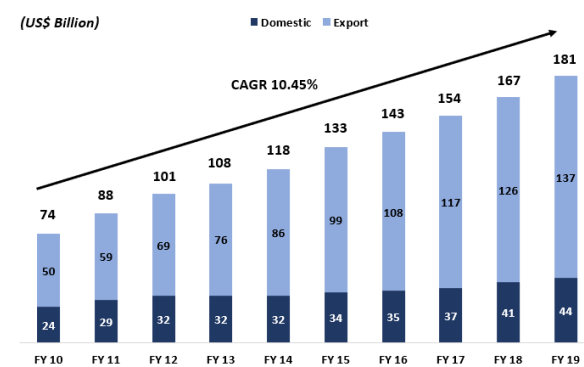

- Net property income ("NPI") of S\$113.4m in FY19, an increase of 13% y-o-y from S\$100.4m in FY18.
- The increase in NPI is attributed to the incremental income from the Anchor Building that was completed in May which was fully leased at completion. This is in tandem with higher contributions from the positive rental reversion in existing properties.

- Distribution per unit was S\$6.45 cents, representing an increase of 15% from S\$5.63 cents in FY18. Dividend payout ratio increased from 36.6% to 61.0%.
- Strong balance sheet maintained, with gearing of 28% that is well below the self-imposed limit of 45%. This leaves a significant regulatory debt headroom of S\$802m.
- Overall portfolio occupancy rate has increased to 99% and WALE by net leasable areas remains stable at 3.8 years.
- Overall portfolio AUM has increased by 7% to S\$2.1b in FY19.
- Overall portfolio total completed floor area stood at 13.1 million square feet in FY19 with total development potential of 7.7 million square feet in the pipeline.

Industry Outlook

The Indian office sector has experienced growth at an unprecedented pace. With gross leasing activity at a historic high of 61.6 million square feet in 2019, the Indian office sector has demonstrated remarkable resilience despite subdued economic growth and muted consumer sentiment. Rapid urbanization of Indian cities alongside sweeping policy reform has also resulted in strong commercial real estate growth.

Robustness of Indian IT exports to drive continued growth for IT market

Revenue from India's IT Business Process Management ("BPM") industry was estimated at around US\$177b in FY19 with a growth rate of 6.1% y-o-y. This is driven by the global trend of offshoring and outsourcing large technology contracts by clients. The trend is expected to be maintained through FY20 with global BPM spending estimated to rise to US\$233 billion. Export revenue from the IT industry has grown at a CAGR of 11.85% to US\$137 billion in FY19 from US\$50b in FY10.

Preferred sourcing destination with leading cost competitiveness to boost demand for office space

India is the leading sourcing destination across the world, representing 55% market share of the US\$185-190b global services sourcing business in 2017-18. India has established itself as the digital hub of the world with around 75% of global digital talent in India. Its unique selling proposition continues to be its cost competitiveness in providing services, which is approximately three to four times more cost-effective than the US. This has enabled foreign clients to enjoy approximately US\$200b in cost savings over the past five years (National Investment Promotion and Facilitation Agency of India, 2019). With more companies outsourcing their operations to India, demand for office space will see an increase, creating a higher net absorption of office supply.

Demographic strength with largest pool of ready-to-hire talents

India's workforce is predominantly English-speaking, which has been a major driver behind its emergence as a global outsourcing hub. India's highly qualified talent pool of technical graduates is one of the largest in the world, making it a preferred destination for outsourcing as many MNCs tap into its IT-savvy workforce. The number of engineering graduates is expected to increase from 651,000 in 2013 to 802,000 in 2020. The estimated median age of India's population is 28.4 years (Statista, 2019), indicating a vibrant workforce which is bound to attract sustained foreign investment in the country.

Government initiatives to boost its business sector

In most countries, there exists restrictions on Foreign Direct Investment ("FDI") which takes the form of limiting the ownership of companies' share capital that non-residents are allowed to hold. The Indian government's favourable policy regime allows for 100% of FDI across a myriad of business sectors, incentivizing foreign companies to set up

Source: Real Estate Intelligence Service (JLL), 2019

shop in India. Such companies are able to hire relatively lower-wage workers and enjoy special investment privileges such as tax exemptions. This has attracted US\$49 billion investment in 2019, a 16% y-o-y increase. Additionally, the implementation of a Special Economic Zone ("SEZ") policy enhances foreign investment and provides for an internationally competitive and hassle-free environment for exports. The tax breaks offered to foreign investors further spurs investments into the Indian economy.

India office's growth momentum to continue

Gross leasing activity at the end of 2019 was at a historic high of 61.6 million square feet, a 25% y-o-y growth (CBRE Research, 2019). The top two states for office leasing were Bangalore and Hyderabad. AIT has a combined 60% exposure of floor area in the aforementioned states.

New completions grew 45% from the previous year, setting a new high of 51.6 million square feet from 46.5 million square feet absorbed in 2019. The momentum in new completions is expected to continue in 2020, hovering at the 50 million square feet mark. Hyderabad will continue its rise in the office market with more than 13 million square feet of office space expected to be completed in 2020. Office assets continued to provide stable returns, with global institutional investors and sovereign wealth funds showing an increasing interest in this sector. Vacancy levels have dipped to 13% in 2019 as a result of the significant growth in new completions. Strong demand coupled with low vacancy have led to rental growth of 4%-8% on an annual basis across several states. With momentum in demand for office space expected to remain strong in the coming years, weighted average vacancy level is projected to remain around 13% despite increasing office supply, thus indicating that supply and demand dynamics are in equilibrium.

Bangalore (34% of AIT's presence)

The take-up rate of office space has declined by 7% on a y-o-y basis in 2019 as compared to the previous year. As the Outer Ring Road submarket continues to saturate, new projects are coming up in the Whitefield submarket and Western Bengaluru, which have not been explored by city developers and investors. As rentals move up swiftly in prime submarkets, affordable submarkets and back-end offices have been gaining traction due to spill-over demand. AIT's ITPB is a 2.7 million square feet facility located in the prime neighbourhood of Whitefield in Bangalore. Future development potential includes an additional 1.1 million square feet of floor area.

Hyderabad (26% of AIT's presence)

2019 was a benchmark year as Hyderabad witnessed the highest ever completions at 13.25 million square feet. The five-fold increase was driven by major project completions. The highest level of net absorption at 10.5 million square feet was also witnessed in 2019, driven by the expanding IT & financial players like Microsoft, Intel and Facebook. High demand for quality space along with low vacancy levels led to rental rates soaring by as high as 8%. Nonetheless, the trend of high completions has come to a standstill as a result of the pandemic and disrupted economic activity, preventing oversupply in Hyderabad.

Chennai (22% of AIT's presence)

Chennai's commercial real estate witnessed significant demand in 2019. The leasing activity was driven by the strengthening of the IT sector, which is increasing its presence in the city. IT and IT-enabled services have contributed to around 51% of total leasing in 2019. The strong presence of an IT corridor and better connectivity with the airport and the rest of the city from the development of transport infrastructure will drive demand in this submarket. AIT's International Tech Park Chennai is primely located 15km from Chennai International Airport.

Figure 13. Well-positioned Locations in Fast Growing Cities in India

Our presence

Source: Ascendas India Trust 3Q19 Presentation

Figure 14. Porter's 5 Forces

Source: NUS Investment Society Estimates

Pune (12% of AIT's presence)

Pune witnessed significant traction in demand with net absorption increasing by 16% mainly driven by the expansion of existing firms along with the entry of new MNCs, such as Barclays, which have leased commercial spaces. Rents escalated by 4% in 2019 as Pune is emerging as an affordable destination for office establishments close to Mumbai, the financial capital of the country. Pune, which is known as a hub for traditional IT, is about 150km out of Mumbai and less than 3 hours by car.

Mumbai (6% of AIT's presence)

The Mumbai office market witnessed a 2% dip in net absorption in 2019. Vacancy levels have come down from 16.1% in 2018 to 13.9% in 2019 as new completions have declined from 5.63 million square feet to 3.59 million square feet y-o-y. However, it is expected to rise in the short to medium term with project completions being on the rise. However, rent prices remained stable, increasing marginally around 1%.

Porter's Five Forces

Illustrating the points below using the Porter's Five Forces diagram, we observe that the increased inflow of foreign investment is expected to spur competition in the industry to some extent. Rising demand for properties in India in addition to favourable government policies have garnered significant interest from Private Equity and Infrastructure funds. This may result in heightened competition going forward arising from increased funding.

Competition within industry - High

There are few major players in the commercial real estate industry in India. However, the level of competition in the industry is expected to increase with global players such as Blackstone, GIC and Allianz acquiring quality office assets. Five of the seven top office owners and developers in India are either foreign-owned or have foreign capital behind them. This is attributed to the strong potential of the Indian real estate market. In the long term, we foresee increased competitive pressure to continually offer new and improved properties to remain relevant.

Threat of new entrants - Low

The high investment costs in terms of capital is a significant barrier to entry for new entrants. This is attributed to the large initial outlay required to build or acquire property along with the high capital expenditure required to maintain and refurbish existing infrastructure. Additionally, securing property in prime locations or signing high-quality tenants may also pose a challenge due to the presence of incumbent players with pre-existing lease agreements in place. This may deter new entrants from venturing into the industry given these considerations.

Threat of substitutes - Moderate

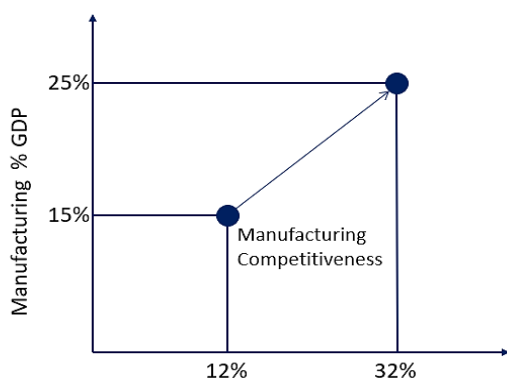

Existing developments in the industry offer tenants a myriad of office spaces and industrial parks to lease from. Switching cost is moderate due to the presence of early termination clauses and inconvenience of relocating staff and equipment to a new location. Additionally, the emergence of coworking spaces poses a threat to the traditional office sector. Shared office space among companies will result in decreased leasing volume and rent prices due to decreased demand. However, it is worth noting that commercial office space providers can correspondingly pivot and adapt to the changing landscape by providing flexible spaces and catering to different tenant demands. AIT's weighted average lease expiry of 6.7 years neutralises the threat of remote working in the near-term since tenants are still contractually obligated to pay their rents despite their employees working remotely.

Figure 17. Well Spread-out Lease Expiry Profile

Source: Ascendas India Trust 3Q19 Presentation

Figure 18. Portfolio Occupancy by Property

Source: Ascendas India Trust 3Q19 Presentation

Bargaining power of customers - Moderate

Tenants looking to lease spaces for their business needs have differing levels of bargaining power over landlords depending on the grade of the office space. For sub-prime locations, the ample supply results in landlords competing on a price basis with tenants having a high level of bargaining power. For prime locations, tenants are relatively price insensitive with landlords competing on the quality and location of the property. Due to the limited supply in the market, bargaining power of customers are low.

Bargaining power of suppliers - Low

The construction industry, which supplies and develops properties for landlords to lease, is comprised of a wide variety of companies of different sizes. As a result of the vast availability, bargaining power of suppliers is low. Additionally, the value of projects awarded and potential for additional developments in future suggests that landlords are in a stronger bargaining position than the supplier.

Investment Thesis

1. Strategic expansion into modern warehousing and logistics in key Indian cities supported by a well-developed pipeline of properties to capitalize on structural shift from old to modern warehousing.

Currently, AIT operates seven modern warehouses located primarily in Panvel, which is set to be the new railway hub of the Mumbai Metropolitan Region running 150 private trains on 100 routes across the country. These modern warehouses are equipped with state-of-the-art technology, advanced fire detection systems and security services, which meets the Grade A requirements of its tenants. These modern warehouses feature structured pallet rack systems which can store up to six levels and super flat floors that are stronger and more durable than ordinary warehouse fittings. Moreover, the warehouses boast greater storage capacity with higher ceiling heights of 13 metres as compared to the normal ceiling height of 9.5 metres.

Modern warehouses capitalize on both the “Make in India” initiative and e-commerce boom in India as greater emphasis has been placed on warehouse storing capacity to meet increasing demand. AIT’s decision to penetrate the warehousing segment in 2018 and its acquisition of additional warehouses in July 2019 have been well-timed to capitalize on the growth in leasing demand for modern warehouses, which recently reached an all-time high of 33 million square feet.

We believe that the street has not priced in the premium of AIT’s expansion into India’s warehousing sector that is located in the major railway hub in India along with the tailwinds from the rise of manufacturing, e-commerce growth and the shift towards quality.

AIT’s sponsor CapitaLand and Firstspace Realty aim to deliver the state-of-the-art logistics facilities across major warehousing and manufacturing hubs in India. Through AIT’s partnerships with the aforementioned entities, a combined target of 15 million square feet of space is expected to be developed over the next five to six years. Currently, 1.25 million square feet of operational space has been completed with another 4 million square feet in development. When these developments are completed, we expect to see a pipeline of quality warehouses that AIT can acquire from its sponsor.

Given the modern warehouses with state-of-the-art facilities are strategically located in major railway hub and have greater storage capacity, this creates stickiness for AIT’s modern warehouses. Thus, we believe that AIT’s strategic acquisition of modern warehouses is timely

and AIT will be able to capitalize on the high growth drivers behind the need for modern logistics and warehousing facilities in India.

2. Favourable presence in India's Special Economic Zones provide structural economic moat. Further supported by government policy of restricting zone supply pipeline to drive high WALE and positive rental reversions.

AIT is poised to enjoy sustained growth in revenue through positive rental reversion trends in the long term given its balanced and well spread out lease expiry profile. Weighted average lease expiry by net leasable area ("WALE") currently stands at 3.8 years as of 31 December 2019. We believe that a low WALE is favourable for AIT in the near-term as it allows them to tap on India's growing demand for office space which has grown more than 25% y-o-y, reaching a record high of 61.6 million square feet according to CBRE.

AIT's properties are strategically located in Bangalore, Hyderabad, Pune and Chennai which are designated Special Economic Zones ("SEZ"). Occupants located in these zones are eligible to receive both direct and indirect tax benefits in the form of tax deductibles. Hence, the overall office space take-up rate has spiked in recent years as companies seek to take advantage of the tax benefits associated with these zones. This is in tandem with the increase in companies seeking to relocate their operations to these favourable locations. We believe that a strong demand for spaces along with shorter WALE will allow AIT to renew their existing lease arrangement at a higher rental rate. Nonetheless, this is supported by the income stability of AIT's healthy overall portfolio WALE of 6.7 years. Currently, the retention rate of AIT's tenants stands at 63% alongside a committed portfolio occupancy rate of 99% across its properties. This is testament to the quality of AIT's properties and cements AIT's ability to deliver continued income stability for its unitholders.

Across AIT's portfolio, positive rental reversion trends of 3% to 34% have been observed. The top 3 properties include ITPC (+34%), The V (+23%) and aVance Hyderabad (+19%). These properties contributed 44% of AIT's net property income as of 31 December 2019. With the average effective rents charged by AIT continuing to remain higher than the rival properties, we are confident in AIT's ability to deliver organic growth through continued positive rental reversion trends across its portfolio in the long term.

3. Robust pipeline of developments and redevelopment plans set to provide a visible income stream going forward.

As of 31 December 2019, growth based on committed pipelines has increased from 13.1 million to 22.6 million square feet. We are convinced that AIT's comprehensive development and redevelopment projects will enable AIT to not only increase rentals over the long-term, but also command a justifiable premium for its space over its competitors. Currently, a new multi-tenanted building in ITPB is in the works and is expected to be completed by 2H20, adding 0.7 million square feet of net leasable area to AIT's portfolio. Moreover, said leasable area has already been fully pre-leased to a leading IT service company. Coupled with the revised government regulation in India, this has increased the development potential in ITPB by 2.7 million to 3.8 million square feet which is expected to be completed by 2H20.

Redevelopment plans focusing on rejuvenating facilities of The V are already underway. The redevelopment which will take place across multiple phases over the next 7 to 10 years is expected to increase the park's net leasable area by 3.5 million square feet. Phase one of the construction is ongoing and the project is on track towards completion by 2H20. We believe that the robust development and redevelopment

Source: NUS Investment Society Estimates

plans will prime AIT to capture the increased demand for Grade A offices in India and also ensure competitiveness of AIT's offerings. The enhancement initiatives, together with the expansion of net leasable area serve as constituents of AIT's comprehensive strategy.

Catalysts

- Success of India's "Phase 4" reopening (allows all offices to run at 100% capacity) to allow offices to remain open past 31 May 2020, when the Indian government reviews the reopening measures. This will prevent deterioration of AIT's top line and sustain growth.
- AIT's successful implementation of Covid-19 control measures in construction and renovation ensuring that pipeline projects are completed and ready for tenants as per schedule.
- Potential accretive acquisitions of other offices that have failed to implement Covid-19 control measures. These offices will likely see strong yield expansion in the second half of 2020 when revaluations are completed. AIT will be able to carry out heavily discounted accretive acquisitions that will serve to drive AIT's strong recovery post Covid-19.

Overview

The chart above reveals AIT's financial condition prospects for the next five years, highlighting our assumptions. Most indicators yield positive and favourable trends that are supportive of the overall BUY recommendation.

Decreasing leverage provides greater debt headroom going forward

AIT recently completed a private placement of an equity fund raising for the initial upfront funding of its upcoming potential investment and existing committed pipeline acquisitions. As of 3Q19, 99.4 million new units were issued bringing the number of total shares post issuance to 1.14 billion. Approximately S\$150m was raised that was four times covered and this has decreased AIT's leverage in FY19 from 33% to 28% enabling greater debt headroom going forward. Majority of the proceeds were used for its upcoming potential investment while the rest was used to pay up existing loans which explains the lower financial leverage ratios in FY20. As seen from AIT's financial analysis, its debt-equity ratio has decreased by 12.1% and its debt-assets ratio has decreased by 1% in comparison to FY19. We believe that the decision of AIT's management to pay up existing loans at an effective weighted average cost of 6.3% is beneficial in the long run as this effectively

Source: NUS Investment Society Estimates

Figure 30. AIT Beta Regression

Source: NUS Investment Society Estimates

allows them to lock in a lower interest rate should they require to borrow in the future.

Strong gearing in preparation of future growth pipelines

Despite its ongoing committed pipeline, AIT's gearing ratio stands at 28%, which is well below the self-imposed gearing limit of 45%. A debt headroom of S\$802m enables AIT to pursue further development and acquisition opportunities to supplement the portfolio, taking full advantage of the low yield environment going forward.

Stabilizing net margins and higher asset turnover

Factoring in the ongoing Covid-19 developments, we expect an impact on AIT's net margins in the near term despite the development and redevelopment plans slated to be complete in 2H20. We foresee consistently high occupancy rates and positive rental reversions in the long term and expect that these considerations will boost AIT's top line figures. This is in conjunction with growth in y-o-y rental reversion driving historical net profit margins. Hence, asset turnover is expected to improve going forward.

Valuation

Valuation Price Target: **S\$1.75**

DDM model

A Dividend Discount Model was utilized to estimate the intrinsic value of AIT's share price. Our model adopts a 5-year forecast period, given the infeasibility of projecting acquisitions and divestments of property on a longer-term basis. We assumed no new acquisitions and divestments for the period forecasted. To calculate the PV of future dividend payments, we took reference to its average historical payout ratio and employed a future forecasted payout ratio of 90% in line with management guidance. To calculate PV of terminal value, we applied a terminal growth rate of 3% to its dividend in 2024 and used the Gordon Growth Model to determine its terminal value, which was then discounted to the present.

Revenue projections

The projected revenues are derived by modelling various parameters of each individual property including the site area, floor area owned by AIT, development potential of the land bank, number of buildings, stake and committed occupancy. We also project capitalization rate moving forward given the micro trends that influence each individual property. We have taken a prudent stance towards our projections and have done so in line with management's guidance of announced and upcoming improvements. We note that these figures differ for many of the properties and many rent escalation clauses vary across different properties. As such, our projections are based on both historical trends as well as market research from both management and external bodies such as CBRE. Should there be a lack of guidance, we adopt a prudent stance and keep such values constant. The DDM is most sensitive to the following factors, derivation of which are explained below.

Revenue growth

Revenue growth for AIT is driven by both sustained strong demand for commercial space in the key areas that AIT operates in as well as management's decision to expand and scale up on various properties such as aVance Business Hub and The V. Macro-wise, we see that the Indian Information Technology and Business Process Management (IT-BPM) segment has seen strong revenue growth at CAGR of 18% from FY00/01 to FY18/19. While FY18/19 may have reflected lower growth, we remain confident of segment growth given that the lower growth was due to FX volatility. Fundamentals considered, we see an upskilling of employees and advancements in new technologies such as automation, robotics, cloud technology and blockchain.

We see the increasing adoption and proliferation of such technologies delivering strong and sustained growth for AIT's upcoming property expansions and improvements. With confirmed improvements to many properties not limited to an additional 3.5 million square feet of floor area to *The V* within the coming 5 years as well as the completion of new buildings in ITPB in FY20, we are confident of AIT's ability to capitalize on such favourable developments in India. Moreover, these developments are in addition to AIT's current efforts to reduce tenancy concentration risk in recent years, reducing concentration ratio for 35% in FY17/18 to 33% in FY18/19. Currently, AIT's top 3 tenants include Applied Materials, Arshiya and Bank of America. We believed that Applied Materials will not pose a significant material risk as the top tenant given the current trajectory of the semi-conductor industry and future upcoming developments such as 5G and IoT. Moreover, Arshiya's diversified sub-tenants comprising APMC FZE, DHL Logistics, Huawei Telecommunications, Rolex Logistics (CISCO) and UPL serve to alleviate concerns of revenue concentration. Nonetheless, AIT's 3rd top tenant, Bank of America, may potentially raise concerns but we believe the risk is well managed given AIT's strategic top tenants Applied Materials and Arshiya.

Cost of equity

CAPM was used to estimate Cost of Equity. Risk free rate of 6% was used and is in line with the current yields on 10-year India government bonds. Beta was taken from Bloomberg which stands at 0.51. Equity market risk premium of 9.1% was used. Cost of equity was calculated to be 7.59%.

Terminal growth

In our DDM model, a long-term growth rate of 3% was used. We recognize that India's economic growth has weakened with the 3Q19 GDP growth slowing from 5% to 4.5% currently. Additionally, the construction sector growth has slowed to 3.3% due to sluggish domestic and external demand. According to CBRE, the demand for space in quality developments and planned infrastructure in India are likely to result in marginal increase of 1-2% in rentals. In light of these projections, we expect that India's future economic growth while still positive is likely to be less strong than it is now which may dampen AIT's revenue growth going forward. As such, in our dividend discount model, a conservative terminal growth rate of 3% was used to reflect these considerations.

Yield spread analysis

A yield spread analysis of AIT's dividend yield against that of the 10-year SGS yield was performed. The current spread sits at 3.28%, versus a historic average of 3.15%. Thus, we believe that AIT presents a relatively attractive risk reward profile for entry at its current price. Moreover, with AIT's ongoing development and redevelopment pipelines, we forecast an increasing revenue stability. A 1-year lookback period was adopted to account for changes in portfolio composition, which includes its completed construction of Anchor building and the forward purchase agreements for BlueRidge 3 and Arshiya's 7th warehouse.

Relative valuation

We performed a RV to provide a sanity check on our primary DDM valuations by using a football field. We benchmarked AIT to industry peers with similar size, revenue mix and geographic exposure. This includes LVGEM China Real Estate Investment Co Ltd, CK Asset Holdings Ltd, China Resources Land Ltd and Peet Ltd. Our primary comparable metrics included +1FY P/E and P/B along with DCF (perpetual growth method & exit multiple method), street estimates from various reputable sources. Our target price of S\$1.75 was validated as it lies within the 75th-95th Percentile Ranges of both the P/E and P/B price

ranges. The intrinsic value of S\$1.75 represents a 45.8% upside. We remain confident that this valuation reaffirms our BUY recommendation.

Investment Risks

Market risk (M1)

Refinancing risk: The Covid-19 pandemic has raised refinancing concerns for AIT's debts. Given concerns over various REITs potentially breaching debt covenants as a result of the deterioration of their loan-to-value as well as interest coverage ratios, there exists a possibility that AIT may face difficulty refinancing their debts in the capital markets or may have to do so at less favourable rates. Moreover, bank credit spreads may potentially widen due to loan book deterioration, which may force AIT to refinance credit and loan facilities at higher rates. Nonetheless, only c.30% of AIT's debt will mature over the coming two years, serving to cushion AIT against severe increases in overall borrowing costs.

Business risk (B2)

FX fluctuations: AIT has high FX exposure to Indian Rupee (INR) due to its operations being concentrated in India. Given that AIT reports its results in SGD, any depreciation will affect AIT directly. Hence, AIT faces significant FX risk which may impact its earnings due to negative currency fluctuations arising from the decline in INR due to the weaker domestic economic data coupled with the structural issues in Indian's economy such as the non-bank financial company (NBFC) crisis which has further driven the economic slowdown leading to the threat of stagflation. To mitigate FX risk, AIT has established a mandate which requires at least 50% of its debt to be denominated in INR while hedging 71% of its INR debts and 29% of its SGD borrowings. Additionally, forward contracts are entered on a monthly basis to lock in rental income that is to be repatriated semi-annually from India to Singapore, further reducing the risk of FX fluctuation in its operations.

Economic risk (M3)

Weakening of India's fast-growing economy: In recent years, India's GDP growth rate has seen deceleration with its 2019 GDP growing at its weakest pace of 4.5%. With the declining growth momentum and uncertainty in the global economy outlook resulting from the impact of Covid-19, the protracted virus outbreak has led to a knock-on effect throughout the entire global economy. This may delay AIT's project pipelines along with the decrease in demand for office space, depressing rental growth in the near term. Nonetheless AIT has a diversified tenant base with an average lease term of 6.7 years and a retention rate of 66%. We believe that this may mitigate some of the impact from the weakening GDP growth rate as well as the economic shocks from the impact of Covid-19. While overall, the entire Indian economy may weaken, we are bullish on the IT and logistics sector that will fare far better under the current economic climate.

Tenant risk (B4)

Concentration of key tenants: AIT's top 2 tenants, Applied Materials and Arshiya may appear to have low risk profiles given their nature of business. Applied Materials will remain resilient given the current trajectory of the semiconductor industry and upcoming developments such as 5G and IoT. Likewise, Arshiya comprises of well diversified sub-tenants including APMC FZE, DHL Logistics, Huawei Telecommunications, Rolex Logistics (CISCO) and UPL. However, Bank of America, AIT's 3rd top tenant, may prove to be high-risk given the cyclical nature of banks and their extensive exposure to the global economy. Nonetheless, we believe that management has effectively de-risked its 3rd top tenant via its choice of Applied Materials and Arshiya as the top 2 tenants.
