## **Electrifying Opportunities Ahead**

### Recommendations

We are initiating coverage of Geely Automobile Holdings Limited ("Geely"). We have given an issuer profile rating of overweight to Geely's credit outlook. We will be focusing on GEELY 3.625% maturing on 25 Jan 2023, and GEELZ 3.000%, maturing on 5 Mar 2025.

#### **Recent Developments**

In the wake of COVID-19 related restrictions in early 2020, Geely initially reported a plunge in both automobile sales and production. In response, Moody's downgraded ratings outlook from stable to under review in March. However, with a strong pick up in Chinese automobile demand and prudent financial management at Geely, Moody's upgraded its ratings outlook to stable and reaffirmed Geely's Baa3 rating.

## **Key Credit Considerations**

Even with the adverse economic climate in 2020, Geely has sufficient financial buffer to comfortably meet all its obligations in the short and medium term. Furthermore, Geely has shown its abilities to generate strong and sustained earnings with healthy margins.

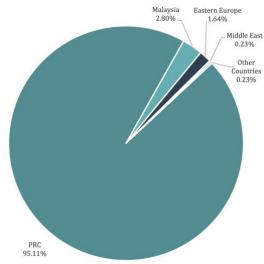

## **Credit Positives**

- Strong rebound in Geely automobile sales volume in China and abroad despite economic headwinds
- Strong sales growth for Geely's new car models and brands
- Powerful model cycle based on platform strategy
  - Well poised with strong technical capabilities to meet booming demand for new EV models

## **Credit Negatives**

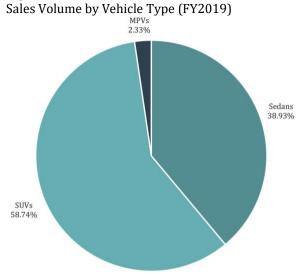

- Overexposure to the Chinese market as the vast majority of production and sales is located in Mainland China
- Execution risks associated with product and geographic diversification
- High R&D costs needed to counter GHG emissions
- Fallen angel risk due to weak parent financials

## **Company Overview**

Geely Automobile Holdings Limited ("Geely") is an automobile manufacturer based in China. Geely's parent company is Zhejiang Geely Holding Group Company Limited ("Zhejiang Geely"), a private company incorporated in the People's Republic of China wholly owned by Mr. Li Shu Fu.

Geely's shares are listed on the main board of Hong Kong Stock Exchange. With its headquarter established in Hangzhou, most of its manufacturing facilities are located in the PRC. It sells "Geely", "Lynk&Co", "Geometry" branded cars through an extensive network of more than 900 dealers in the PRC, and over 250 Lynk&Co Centres and 21 Lynk&Co Spaces in the PRC. Geely also exports its products to developing countries in Eastern Europe and the Middle East.

As of 15 December 2020, Geely's market capitalisation stood at USD 29.32 billion. Today, Geely has 38,000 employees worldwide and generated an annual revenue of over US\$ 14 billion in FY2019.

#### **Revenue by Geographical Region**

Geely sells its products primarily within the Chinese domestic market and to overseas markets such as Malaysia, Eastern Europe and the Middle East. In FY2019, the Chinese domestic market accounted for 95.11% (*figure 1*) of Geely's annual revenue, followed by Malaysia (2.80%), Eastern Europe (1.64%), the Middle East (0.23%), and Other Countries (0.23%).

#### Sales Volume by Vehicle Type

The SUV segment formed the bulk (58.74%) of Geely's annual car sales volume in FY2019 (*figure 2*), followed by the Sedan segment (38.93%) and MPV segment (2.33%). Geely is a relatively new entrant to the MPV segment, having launched its first MPV recently in March 2019.

Geely's vehicle sales can be further segmented by conventional vehicles and new electric vehicles ("EV"). In 2015, Geely implemented a new EV strategy - "Blue Geely Initiatives" - to transform the Group to be an industry leader in EV. Geely's EV segment has been growing rapidly (*figure 3*) at 60.17% CAGR between FY2016 and FY2019, outpacing the growth of conventional vehicle sales (13.63% CAGR) over the same period

#### **Main Customers and Suppliers**

Geely's five largest customers and its largest customer, Hangzhou Youhang Technology Company Limited, contributed to 3.1% and 1.1%, respectively, to the Group's total annual revenue in FY2019. Hangzhou Youhang Technology Co. Ltd. is a related company controlled by Mr. Li Shufu.

Geely's five largest suppliers and its largest supplier contributed to 13.8% and 3.7%, respectively, to the Group's total annual purchases in FY2019. The third largest supplier, Zhejiang Geely Automobile Parts and Components Company Limited, is a related company controlled by Mr. Li Shufu.

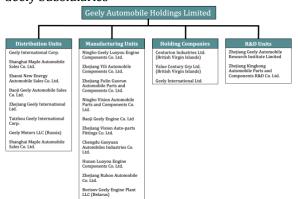

#### **Subsidiaries and Associated Companies**

Geely operates an extensive network of wholly-owned subsidiaries (*figure 4*), primarily in the PRC, for the manufacturing, research and development, distribution, and sales of Geely automobiles.

Genius Automobile Finance Company Limited ("Genius AFC") is a 80%owned vehicle financing joint-venture (*figure 5*) formed with BNP Paribas Personal Finance. It is principally engaged in the provision of auto wholesales financing solutions to auto dealers and retail financing solutions to end customers, mainly supporting key auto brands associated with Geely, including "Geely", "Lynk&Co" and "Volvo Car".

Source: FactSet

Through its parent company, Zhejiang Geely, Geely works closely with Volvo Car AB ("Volvo") in technological development. Dealers of Volvo also recommend its retail consumers to use Genius AFC for vehicle loans to finance their purchase of Volvo-branded vehicles.

Geely and Volvo have also entered into joint ventures to manufacture and sell vehicles under the "Lynk&Co" and "Polestar" brand. "Lynk&Co" targets the high-end passenger vehicles market in both the China and international markets while "Polestar" produces EV.

Through its parent company, Geely is also associated with Proton Holdings Berhad ("Proton"). In May 2017, Zhejiang Geely acquired 49.9% equity interest in Proton. After this acquisition, Geely entered a sales agreement in Sep 2018 to license its intellectual properties and sell after-sales parts to Proton through Zhejiang Geely.

#### **Recent Earnings Review**

Geely's performance in the first half of 2020 was adversely affected by the outbreak of COVID-19.

Total revenue in the first half of 2020 (*figure 6*) decreased 23% yearon-year to RMB36.82 billion, due to lower sales volume and the production disruption caused by the partial lockdown in most areas in China in early 2020. Geely's total sales volume in the China market decreased 17% yoy, while export sales volume slid 49% yoy on the back of tepid global demand caused by the outbreak of Covid-19 worldwide.

Average selling price declined 2.4% and operating margins narrowed 3.46% to 5.7% due to operating deleverage, greater dealer incentives, higher R&D and D&A expenses. Net profit was down 43% yoy, and dealer inventory was at three months of sales at the end of July.

Geely has lowered its 2020 shipment target to 1.32 million units from 1.41 million, implying an 11% increase in 2H2020 vs a year ago.

EV and SUV models remained the focus of Geely's new products offering in 1H2020. Geely launched a new compact SUV model "ICON" and its EV variant, its first seven-seat SUV model "Geely Haoyue" and a new crossover model "05" under the Lynk&Co brand.

## **Ownership & Management**

Zhejiang Geely Holding Group Co. is the largest shareholder and parent company of Geely (*figure 7*). Geely's founder and current chairman, Mr. Li Shu Fu, has effective ownership of Geely as he personally owns 0.99% of the company and is also the controlling shareholder of Zhejiang Geely.

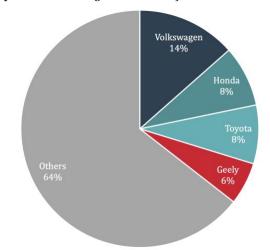

Zhejiang Geely has historically reported higher leverage than Geely, but this situation is partially mitigated by Geely's status as a listed and regulated entity, and its track record of maintaining sound corporate governance.

Geely's independent non-executive directors review the connected transactions with its parent that supports Geely's passenger vehicle production in China through its parent's licenses. These transactions are also subject to annual transaction caps approved by the Hong Kong Stock Exchange and independent shareholders.

The next 3 largest shareholders are institutional fund managers, with Vanguard Group, one of the largest asset management firms in the world, having the most substantial stake with 1.88% of outstanding shares.

## **Industry Outlook**

#### <u>China Outlook</u>

China is the world's biggest automobile market with 26 million unit sales in 2019, with the US reaching only 65% of that at 17 million. The passenger vehicle market that Geely competes in posted 21 million unit sales. There is sizable growth potential through market share due China's low penetration of about 186 vehicles per 1,000 people in 2019. Hence, China's auto market should achieve sustainable growth in passenger vehicle unit sales over the medium term.

However, demand has been slowing in recent years since 2018, with a 4% and 10% fall in total Sedan, SUV and MPV sales in 2018 and 2019 respectively. Nevertheless, Geely has maintained its market share as the third largest passenger vehicle brand and seventh largest automaker by unit sales in China in 2019.

#### Competitive domestic automobile market

The Chinese automobile market has been facing significant overcapacity with all automakers increasing their focus on the entrylevel mass market models, leading to sustained high levels of competition. The competitive pressure requires automakers to maintain high levels of capex and R&D, while shortening the time any model can remain popular in the market. Major international manufacturers like Volkswagen, Honda, Toyota (*figure 8*) compete on product and brand, while a large number of local competitors including Dongfeng, China Grand Auto compete on price and value (*figure 9*). This has placed sustained profitability pressure on Geely and prevents significant margin improvement.

Geely's upmarket brand Lynk & Co. may ease pressures from overheating competition in the low-end, mass-market brand. A strong high value model lineup variety in 2021, will bring to market a variety of new high value models based on Geely's world-class BMA, CMA, SPA, and new SEA modular architectures, covering multiple segments from compact to full size and powertrain from pure electric to hybrid to traditional gasoline power.

#### China's recovery from COVID-19

China leads the global auto industry in recovering from lows hit during the COVID-19 pandemic. From a 46% decrease in total sedan, SUV, MPV and EV monthly sales in April, sales rebounded with a strong 20% in September, driven by pent-up demand and a notable 41% increase in EV sales (*figure 10*).

#### China's automakers liquidity and leverage position

Nevertheless, free cash flow in 2020 may be pressured, given a large operating outflow in 1H2020. Capex for most automakers is significant due to R&D and expansion in EV while operating margins are narrowed with increasing dealer incentives. Liquidity and leverage may improve from 2021 with improved earnings. Geely and Dongfeng have comparatively stronger financial profiles (*figure 11*) with a sustainable net cash position while Grand Auto's liquidity profile is weak due to high reliance on short-term debt.

#### Growing Chinese demand for premium brands

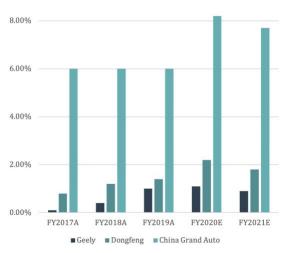

Premium brands due to Chinese buyer's consumption upgrade led to Japanese and German brands sales growth outpacing the others, increasing competition for market share. Geely's shipments, excluding those of its upmarket brand, fell 12% in 2019, underscoring the mounting pressure on China's low-end, mass-market auto brands.

#### Shifts towards EV

China's race to become carbon neutral by 2060 has shaped a broader shift towards EV. With hybrid offerings, the target five-year EV sales mix target will be revised down to 11% from the original 20% of passenger-vehicle unit sales to keep emissions cuts on track as these

Figure 11. Chinese Automakers Adjusted Leverage

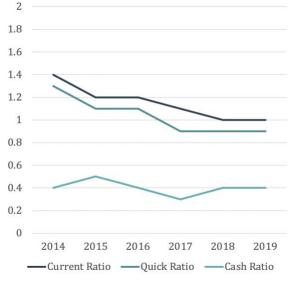

10.00%

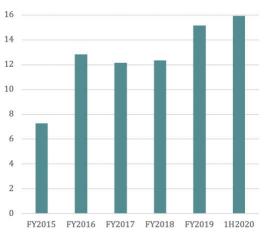

#### Figure 12.

Liquidity and Solvency Ratios

**Figure 13.** Net Cash Position (RMB billion)

Source: Geely Annual Reports

hybrids can help offset carbon emissions. Geely, along with its competitors such as BYD and Li Auto, are most likely beneficiaries as their EV sales exceed those of Volkwagen and General Motors, which are the largest automakers in China. An estimated 21% of passenger vehicles on China's roads will be EVs in 2031.

Source: Team Estimates

#### **Overview**

The table above shows Geely's 5-year historical financial performance including key ratios indicating their profitability, activity, liquidity and leverage positions.

#### Healthy unit sales

Total sales volume grew 21.70% CAGR between 2015-2019. During this period, Geely launched its high-end line up, Lynk&Co, in 2017 and its first MPV in 2018. This represents Geely's upward stretching efforts and also its diversification into all the major segments (sedan, SUV and MPV) in China's passenger vehicle market.

However, sales volume declined from its peak in 2018, falling 9% YoY in 2019. This was primarily due to weakness in China's passenger vehicle market in 2019 caused by economic uncertainties arising from the trade dispute between China and the USA, the elimination of purchase tax subsidies for fuel efficient vehicles, and new emission standards. Thus, we expect the fall in sales volume in 2019 to be one off and not be of concern. Moving forward, we expect sales volume to rebound in 2021 and grow moderately in 2022, driven by overseas sales growth from Lynk&Co cars and EV.

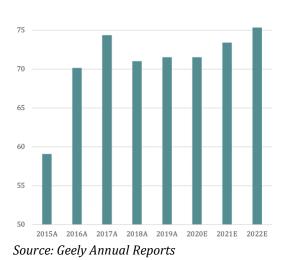

#### Strong liquidity position

Geely's decreasing current ratio and quick ratio (*figure 12*) since 2014 is unlikely to be a cause for concern. Since 2012, Geely has maintained a growing net cash position of RMB15 billion in 2019 (*figure 13*).

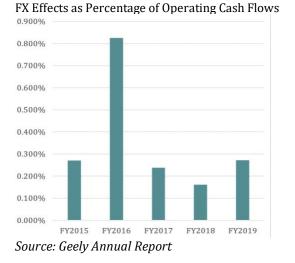

Furthermore, in June 2020, Geely raised HK\$6.48 billion (\$832 million) from a share placement of 600 million new primary shares. Geely plans to use the net proceeds for business development, general working capital and to maintain liquidity after reporting a sharp plunge in revenue and profits in the first half of 2020. This issuance provides an additional liquidity buffer for Geely to comfortably meet its operational expenditure and debt obligations without raising its leverage.

We expect Geely's liquidity position to remain strong in the coming years. The management has shown prudence in cash management. For instance, in 1H2020, it cut capital expenditure by 11% to preserve cash, on top of the share placement. Furthermore, we expect Geely to

**Figure 14.** Revenue per Vehicle Sold (RMB '000)

## Figure 15.

continue generating positive cash flows on the back of moderate earnings growth.

#### Increasing profitability margins

Apart from a dip in growth in FY2019 due to weaker consumer demand, Geely's gross profit margin, operating margin and net income margin have recorded moderate growth between FY2014 and FY2018. Even considering the dip in FY2019, Geely's average operating profit margin over the past 5 years remains healthy at 17.04%.

Geely has also experienced modest topline growth with average revenue per unit sold between 2015 and 2019 (*figure 14*) increasing by 3.90% CAGR. Moving forward, we expect revenue per unit to grow moderately in 2021 and 2022 fuelled by higher-priced models and stronger overseas car sales.

#### Increasing, albeit healthy, financial leverage

Geely's debt-to-equity ratio has risen sharply from its low of 3.8% in FY2017 to 14.90% in FY2019. This was mainly driven by an increase in borrowings for capital expenditure. Nevertheless, even with the sharp increase in FY2019, Geely's financial leverage remains healthy, with a debt/EBITDA ratio of 0.7 in FY2019. Furthermore, Geely has ample interest coverage, with EBITDA-to-Interest ratio of 88.1 in FY2019. This indicates Geely is unlikely to face difficulties paying the interest on its existing obligations to creditors.

#### Moderate exposure to FX risks

Geely is listed on the Hong Kong Stock Exchange and traded in HKD. However, Geely's operations are principally to domestic sales in Mainland China and its assets and liabilities are mainly denominated in RMB. It also has increasing exposure to other currencies such as the USD and Malaysian ringgit (MYR) due to increasing car exports to international markets.

Nevertheless, even with increased overseas sales, we consider FX risks for Geely to be low to moderate. Historically, Geely has managed and hedged against FX fluctuations adequately; FX changes have averaged to be less than 1% of operating cash flows for the past 5 years (*figure 15*).

## **Recent developments**

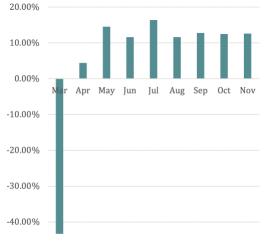

#### Secondary Listing on Shanghai Stock Exchange's Sci-Tech Innovation Board (STAR Market)

On 28 September 2020, Geely secured approval for its proposed listing on the STAR Market. It plans to raise 20 billion yuan (\$2.93 billion) from a public share sale, with the proposed number of RMB shares to be issued will be no more than 15% of the Company's issued share capital as of 23 June 2020. Geely intends to use the proceeds for research and development of new automobile products, prospective technology research and development, industrial acquisition, and replenishment of working capital.

#### Merger with Volvo

On 10 February 2020, Geely announced a possible merger with Volvo, where the combined entity would be listed on the Hong Kong and Shanghai stock exchanges. Details are still unknown and talks have been put on hold as focus was turned to post-COVID sales recovery. Volvo CEO has indicated talks will likely resume in earnest early 2021. The merger could realise synergies in cost structure and new technology development. Due to the aforementioned listing on the Sci-Tech Board, Geely is currently prohibited from making changes to its capital structure. Geely may need up to \$12 billion to finance the deal as Volvo's market value could range from \$8.1-\$11.6 billion. It could tap the debt and equity capital markets to finance its merger, as suggested by its preliminary push for a listing on the Sci-Tech Board.

## **Figure 16.** China Auto Sales YoY growth by Month in 2020

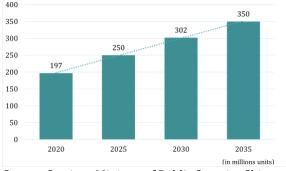

-50.00%

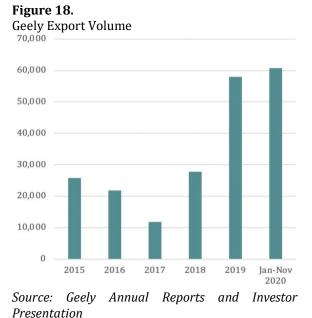

Forecasted vehicle parc in China 2020-2035

## Moody's credit rating outlook upgrade

On 12 June 2020, Moody's confirmed Geely's credit rating as "Baa3" and upgraded its outlook from "rating under review" to "stable" on strong recovery of the Group's sales in China since April 2020. Moody's had previously downgraded Geely's outlook on 26 March 2020 due to challenging industry conditions after the global outbreak of Covid-19.

## Joint ventures with battery makers

In April 2019, Zhejiang Jirun Automobile Co., a Geely subsidiary, formed a RMB 1 billion joint venture with major domestic EV battery supplier Contemporary Amperex Technology ("CATL"). In June 2019, Geely announced plans to establish a US\$188 million (RMB 1.3 billion) joint venture with Korean battery supplier LG Chem, where both parties would invest US\$94 million each in the venture. It is expected to have an annual production capacity of 10 GWh by the end of 2021, and its products would be supplied to Geely's electric vehicles from 2022.

## **Issuer Credit Analysis**

## Credit Positives

## 1. Robust recovery of automobile demand in China

Despite an initial sharp plunge in Chinese auto sales in early 2020, it has since rebounded strongly (*figure 16*). This trend is expected to continue into 2021 on the back of China's economic recovery.

Geely is also expected to benefit from the latest 14th Five-Year Plan (2021-25) and China's focus on "dual circulation". The Chinese government has doubled down on efforts to develop the domestic market and stimulate domestic demand. The government plans to increase China's urbanisation rate to 75–80% over the next 15 years, fuelling demand for automobiles to promote city development. The Chinese government forecasted a steady increase in vehicle parc to 350 million units by 2035 (*figure 17*). Geely's EV business further stands to gain from China's move towards green technologies and reduction in carbon emissions.

## 2. Sustained unit sales growth in new models and brands

Lynk&Co has reported strong car sales growth in 2020, posting record high sales volume for 5 consecutive months since June 2020. In November 2020, it sold 22,800 units, the highest since the brand was launched.

Among "Geely" branded cars, Boyue has performed well in Chinese and Malaysian markets, ranking as the 3rd and top best-selling SUV models in the respective markets. Overall, we expect Geely to continue to be able to launch competitive and commercially successful car models that will grow its revenue in the medium term.

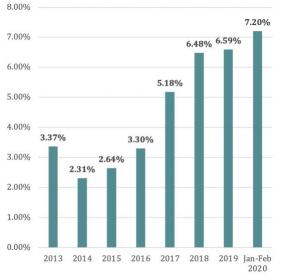

## 3. Powerful model cycle based on platform strategy

It will launch 5 new models in 2021 (2 new EV models under the PMA platform and 3 new ICEs with hybrid versions) and 4 new EV models (from PMA) equipped with L4/L5 autonomous driving functions in future. Such an aggressive model launch pipeline makes Geely well-poised to capture more market share continuously in an operationally efficient manner as it benefits from the scale effect brought by its platform strategy.

## 4. Strong capabilities and demand for new EV models

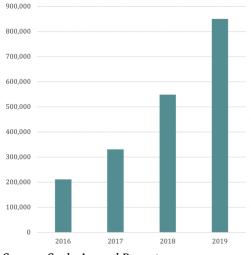

Geely has been ramping up its R&D spending on EV and increasing its EV lineup. We expect this to give Geely a competitive position to fend off EV competitors in China such as Tesla and BYD. Furthermore, the EV market share in China is expected to rise to 11-14% by 2022 according to a McKinsey report. Thus, we believe that Geely is well poised to leverage this growing market opportunity to diversify away from its existing lineup of conventional vehicles.

## **Figure 19.** Geely Market Share in China

Source: CarSalesBase

Source: Geely Annual Reports

Geely's joint ventures with lithium-ion battery makers CATL and LG Chem would also be able to ease pressures on its margin through pursuing vertical integration at its EV business. The planned battery ventures could yield a competitive edge, with benefits from two aspects. Firstly, it gains from a reliable, cost-effective supply of batteries. Secondly, it gains half the venture's profit from the 50:50 Geely-LG Chem battery venture and 51:49 CATL-Geely battery venture.

#### Credit Negatives

#### 1. Geographical concentration in the Chinese market

As mentioned above, Geely's revenue is geographically concentrated in the Mainland Chinese market (95.11% in FY2019). Thus, Geely revenue and profitability is highly sensitive to any changes in the Chinese market and the RMB. Nevertheless, we are confident of Geely's efforts to diversify into international markets. This has been done primarily through launching high-priced models under the Lynk&Co brand in Europe. In addition to export of vehicles from China, Geely also assembles some models sold overseas using contract manufacturing arrangements with local partners. Thus far, this has been largely successful as Geely's exports have increased steadily since 2017 (*figure* 18). We expect this export growth to continue in 2021 and 2022, thereby reducing Geely's revenue concentration in the Chinese market.

# 2. Execution risks associated with product and geographic diversification

Geely faces risks associated with broadening its product lineup to include higher-priced models. The Chinese automobile is highly competitive. Geely faces stiff competition from international manufacturers such as Toyota and Volkwagen, as well as domestic manufacturers such as Dongfeng Motor Group and Guangzhou Automobile Group. These competitors compete on product and brand, while a large number of local competitors compete on price and value. Chinese carmakers, including Geely, have ramped up R&D expenses to produce new, competitive models.

Despite the competitive nature of the market, Geely has been able to gain market share (*figure 19*). Moving forward, we expect Geely to continue to gain market share as it continues to produce new commercially competitive car models.

As Geely expands overseas, it also faces stiff competition against incumbent carmakers in various international markets. Nevertheless, we are confident of Geely's strategy to partner with local carmakers to successfully enter new markets. For instance, Geely sells vehicles in Europe under the Lynk&Co JV in which Geely partners with Volvo. Likewise, in the Malaysian automobile market, Geely partners with Proton to sell Geely branded cars.

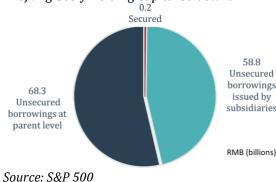

#### 3. High R&D costs needed to counter GHG emissions

Geely is facing increasingly stringent regulation in China and globally when it comes to greenhouse gas emissions. EV only accounts for about 8% of total sales volume in 2019, but it is quickly ramping up EV offerings. Geely will have to invest substantially in EV R&D (*figure 20*) and new model launches in the next few years to meet China's dual-credit requirements on domestic auto makers.

#### 4. Fallen angel risk due to weak parental financials

Geely's US\$300 million senior unsecured notes ratings are equalized with its issuer credit rating because there are no subordination risks. As of 30 June 2020, all of Geely's RMB 4.2 billion debt was unsecured debt at parent level. Due to weak parent financials, Geely's bonds may suffer a downgrade. Zhejiang Geely's debt to EBITDA ratio was at a high 2.2x in 2019 and lower profit and free cash outflow could weaken it to close to 3x in 2020. This was largely attributed to high capex, including capitalized R&D costs of over RMB40 billion in 2018-2019, and acquisitions that significantly increased total debt. Leverage will

increase if Zhejiang Geely's capex appetite remains high. Zhejiang Geely Holding faces a negative outlook with considerable leverage pressure in 2020-2021, and ratings may lower if its debt-to-EBITDA ratio stays above 2x sustainably with low likelihood of meaningful improvement.

#### Overweight Geely Automobile Holdings 3.625% 01/25/23

GEELY 3.625% 01/25/23 is a Senior Unsecured bond issued in USD, rated BBB-. The fixed coupon bond has an issue price of \$102.97 and YTM of 2.152.

#### RV: GEELY 3.625% 01/25/23 vs NSANY 3.043% 09/15/23

NSANY 3.043% 09/15/23 was identified as a suitable comparable issued in USD due to similar coupon, maturity, rating and issuing industry. GEELY 3.625% 01/25/23 has a larger yield with a 82.3 bp spread over NSANY 3.043% 09/15/23. While both are rated BBB-, GEELY 3.625% 01/25/23 is vielding above the curve and priced at \$102.97, \$1.67 cheaper than NSANY 3.043% 09/15/23 as of 27th Dec 2020. The differences in risks could be attributed to Nissan having more diversified geographical operations across Japan, North America, Europe and Asia. However, we believe GEELY 3.625% 01/25/23 is relatively less risky with the after-effects of COVID-19, as the Chinese auto market leads global auto sales, with the potential to resume moderate long-term growth. By the end of 2022 before its maturity, the market is projected to be the only region to recover to 2019 volume. On the other hand, auto sales in Europe and North America are recovering but not expected to fully recover in the near term, while Japan is still recording decreases in auto sales. Hence, Geely's market concentration could be an advantage for its 3.625% coupon bond that is due in the near term. In addition, Nissan reported a net loss of \$6.2 billion net loss for FY 2020 while it seeks further credit lines to finance its liquidity requirements. Hence, in contrast, Geely's strong liquidity position and positive forecasted net profit for FY2020 are encouraging signs that it is able to service its debt amidst a muted automobile outlook globally.

#### RV: GEELY 3.625% 01/25/23 vs GEELZ 3% 03/05/25

Geely Finance Hong Kong Ltd is a subsidiary wholly owned by the parent company Zhejiang Geely Holding Group that provides investment management services and engages in bond issuing for its group company. It was newly established in 2019 and information about its operations and financial position is limited. As it is guaranteed by its parent company, we believe it is reasonable to regard it much like a bond issued by its parent. GEELZ 3% 03/05/25 trades at a higher premium of 64 bps spread over GEELY 3.625% 01/25/23, at a slightly lower price with a difference of \$2.273 between the two. Both are yielding below the curve as the remaining outstanding Zhejiang Geely Holding Group's bonds are riskier due to the higher leverage position of the parent company. Looking at the yield history, the spread of the bonds is wide at an average of 69.9bps with a low of 46.36 bps in the past 3 months. We think the higher coupon and shorter remaining duration for GEELY 3.625% 01/25/23 has been priced in and maintain an overweight position given the smaller risks compared to its parent's company bonds.
