Key Executives

Mr. William Tay Chief Executive Officer
Ms. Koo Lee Sze Chief Financial Officer

We are initiating coverage of **CapitaLand Ascendas REIT**, ("**Ascendas" or the "Company") SGX:A17U** with a BUY rating and a **\$3.50** 12M price target.

1H22 Earnings Highlights

- Gross Revenue increased 13.7% from S\$586.0m in 1H21 to \$666.5m in 1H22
- Net property income (NPI) increased 7.0% from S\$445.6m in 1H21 to \$476.9m in 1H22
- Distributable income increased 6.3% from S\$311.0m in 1H21 to \$330.8m in 1H22. DPU was 7.87 cents for the period declared
- Gearing Ratio decreased from 37.6% in 1H21 to 36.7% in 1H22, well below MAS mandate of 50.0%

Investment Thesis

- Ascendas remains attractive vis-à-vis peers with interest rate hedging from accretive acquisitions and asset enhancement initiatives
- Ascendas' consumer base in rapidly developing industries increases income stability and potential for continued outperformance
- Low cost of debt and smaller acquisition values signals a shift to debt financing, resulting in resilient DPU growth

Catalysts

- Acquisitions of new properties or joint venture partnerships with CapitaLand
- Introduction of new AEI initiatives for properties with low occupancy rates
- Positive macro-outlook to buttress landlord market
- Upcoming dividend declarations for 1H 2023

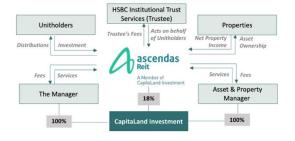

Valuations

Our 12M price target at the date of coverage is **\$\$3.50**. Using the AEI targets guided by management, along with a dividend growth rate of 1.3% and units growth rate of 5.5% from FY22-FY26, a DDM model was used to obtain our valuation. Our target price falls within the valuations of Ascendas' competitors, as well as DCF valuation estimates. The current yield spread between Ascendas and 10-year SGS of 2.5% is lower than the 1-year lookback yield spread mean of 2.8% and a mean reversion is expected with a focus on financial prudence and healthy gearing.

Investment Risks

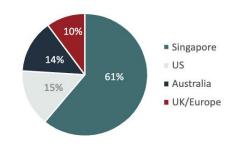

- Challenging macroeconomic conditions for rapidly rising industries: The increased cost of debt may limit the ability to finance future acquisitions to boost portfolio return performance and depress bottom line figures.
- Sustained increase in electricity and production input costs: Tight supply has led to an increase in utility costs for portfolio properties.
- **Fluctuations in foreign exchange rates:** Exchange rate fluctuations resulted in the erosion of rental income.

Company Overview

CapitaLand Ascendas REIT is Singapore's first and largest listed business space and industrial REITs by asset size. It focuses on developed markets in a range of industries from Business Space and Life Sciences to Industrial and Data Centres segments with holdings in Singapore, US, Australia and Europe. Ascendas has been listed on the Singapore Exchange Securities Trading Limited since November 2002. The company is backed by CapitaLand Investment Limited, a leading global real estate investment manager with a strong Asia foothold. This is represented by its trust structure, where its managers are fully owned subsidiaries of CapitaLand.

As of 3rd December 2022, Ascendas has a portfolio value of \$16.55 billion. The company has a well-diversified portfolio across 4 key markets: Singapore, US, Australia and Europe, with a more substantial portion based in Singapore. Ascendas currently holds 228 properties across the business space, industrial and data centres as well as logistics sectors. On a more granular level, Ascendas is diversified over 20 subcategories of these industries with the largest representation being logistics and supply chain at 11.9%. Additionally, no single property accounted for more than 4.2% of its monthly gross revenue.

In terms of financial performance, both gross revenue and net property income margins are generally on an increasing trend, whereas the outlook for distributable income is optimistic with a gradual recovery. The reason for two 2019s is due to the change in Ascendas' financial year end, and the dip in DPU was due to a larger base of units for the REIT, where Ascendas raised 1.2 billion through a private offering which enlarged the REITs base by over 398 million units.

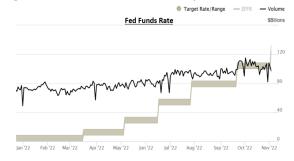

As for Capital Management, Ascendas' 36.7% aggregate leverage is well below MAS' limit of 50.0%, which represents an available debt headroom of approximately S\$4.6 billion. Debt maturities are well-spread across 10 years in conjunction with a healthy A3 credit rating. The REIT also ensures that majority of its portfolio is hedged against interest rate and exchange rate risks at 78.0% and 75.0% respectively.

Asset management remains strong with an upward trend for portfolio occupancy and rental reversion. Portfolio occupancy rate was 94.0% with a positive rental reversion of 9.4% for the period. Additionally, Ascendas has a Portfolio WALE of 3.7 years, with only 10.2% of gross rental income due in FY2022.

1H22 Earnings Review

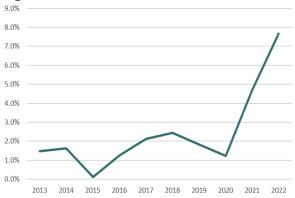

- Gross Revenue increased 13.7% from S\$586.0m in 1H21 to \$666.5m in 1H22
- Net property income (NPI) increased 7.0% from S\$445.6m in 1H21 to \$476.9m in 1H22
- Distributable income increased 6.3% from S\$311.0m in 1H21 to \$330.8m in 1H22. DPU was 7.87 cents for the period declared
- Gearing Ratio decreased from 37.6% in 1H21 to 36.7% in 1H22, well below MAS mandate of 50.0%
- Overall Portfolio Occupancy Rate increased to 94.0% in 1H22 from 91.3% in 1H21 with a positive rental reversion of 9.4% in the period
- High level of natural hedging at ~75.0% of portfolio, which adds to Ascendas' income stability in the near-mid term

Industry Outlook

The real estate industry is projected to experience greater uncertainty as central banks across the world continues to increase interest rates in response to rising unexpected and uncontrolled inflation. Despite inflationary headwinds, the industry still stands to gain from a shift in power dynamics and enjoy strong growth in the e-commerce market as seen in the increase in demand for logistics spaces.

Projections of higher US interest rates to increase cost of debt

FY22 marks the start of the Fed's rate hikes (refer to Figure 6) to negate future inflationary pressures on the United States' economy as the world's largest economy deals with future inflationary pressures (refer to Figure 7). In doing so, REITs that are leveraged on floating interest rates will find a substantial increase in the cost of borrowing. This is supplemented by the traditionally high amounts of debt employed to finance the acquisition of properties and/or asset enhancement initiatives which instigates a heightened level of fear on REITs' ability to ensure bottom line protection and continued performance in dividend pay-outs for its shareholders. The expected increase in loan repayments will significantly depress bottom line figures into the future as REITs look towards locking in fixed interest rates on their existing loans and reducing future loans to not risk any illiquidity concerns. This will likely be followed by and increase in cash holdings to increase investor's confidence in the ability to cover interest repayments.

Moreover, the United States released news that the annual inflation rate (YTD) slowed to a gain of 7.7% compared to the market's expectation of 7.9%. The October Consumer Price Index (CPI) showed an increase of 0.4% change month-on-month relative to the street's estimates of 0.6%. Given the over-estimates of market expectations, it does seem that the interest rate hikes have taken effect to ease the exemplary growth seen during the pandemic bolstered by close to zero interest rates to boost spending all around. This may lead to a more optimistic outlook for investors and REITs as the monetary policy tightening seems to have taken its course to gradually slow down inflation and taking into account recessionary fears for the US economy to prevent any regression in business growth. As such, the industry faces an exponentially difficult time in finding accretive acquisitions to boost growth metrics and portfolio desirability given the aforementioned macroeconomic factors.

Rising demand for onshore logistics facilities in Singapore

Singapore's e-commerce scene is expected to reach US\$13.3 billion in market size by 2026 at a compounded annual growth rate of 16.23%. The increased consumer preference for anything online shopping will result in the increased demand for distribution facilities within Singapore. As consumers prioritise the need for convenience and accessibility to various goods and services, there is a paradigm shift from physical to online retail and these firms will respond in kind to continue to capture more market share.

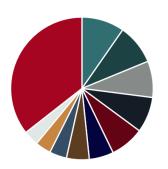

Additionally, the trend is exacerbated by government initiatives to facilitate the ease of trade through international agreements such as RCEP and FTAs to reduce any red tapes in cross-border business operations. To further develop the country's ability to handle rising demand for these products, the government sought out to increase the production capacity of to take on more shipping vessels and increase its efficiency via the much-anticipated development of the Tuas Mega Port. This will further bolster the capability of Singapore to unload shipping hauls and meet the projected increase in demand for ecommerce services.

Porter's Five Forces

Illustrating the points below using the Porter's Five Forces diagram, we observe that the expected uncertainty in interest rates and CapitaLand Ascendas REIT's cemented position will allow it to continue to be an industry leading option for investors looking to diversify their portfolio and increase exposure to the real estate industry.

Competition within industry -Moderate

Entrenched oligopolistic position as the largest Singapore Industrial REIT by assets under management and market capitalization. Well positioned properties within finance hubs and industrial areas presents desirability across the portfolio.

Threat of new entrants - Low

The industry presents high barriers to entry due to the requirement of large capital outlay to finance acquisitions. Additionally, due to the current inflationary economic climate and high interest rates, the presence of a strong sponsor to secure low cost of debt is a great competitive advantage to reduce interest repayments and protect the amount of income distributable to shareholders.

Threat of substitutes - Moderate

Management is slated to continue to undertake redevelopment and asset enhancement initiatives (AEIs) to reposition and upgrade its properties to better differentiate quality offered to potential and current clientele. A new enhancement project of S\$15.5 million, commenced at The Alpha, a business space property located at Singapore Science Park 2. The initiative will include a refurbishment of the main lobby to include modern collaborative spaces such as meeting rooms and pods.

In total, there are a total of five current development and AEI projects worth S\$566.0 million and are expected to complete between 4Q 2022 and 2Q 2025.

Bargaining power of customers - Low

The relatively low WALEs of 3.4 and 3.1 years for Singapore and Australia respectively will allow Ascendas to utilise their pricing power in the current landlord market on rental income in the short term to secure and incorporate rent hikes.

Strong demand for logistics properties are also likely to reduce customers' bargaining power as the landscape to obtain desirable locations for distribution to reduce transportation costs and optimise supply chain management becomes increasingly competitive.

Bargaining power of suppliers - Low

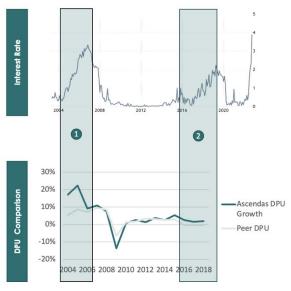

There is a small number of possible customers able to finance large purchases of property en-bloc as these properties tend to be listed the market for a long time. Hence, CapitaLand Ascendas REIT will have the ability to negotiate below listing prices and strategically acquire new properties.

Investment Thesis

1. Ascendas remains attractive vis-à-vis peers with interest rate hedging from accretive acquisitions and asset enhancement initiatives

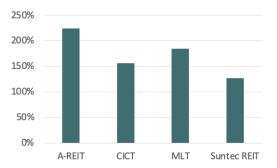

In an environment of high interest rates, REITs are faced with declining property values and increasing borrowing costs. Moreover, the relatively high dividend yields generated by REITS become less attractive in comparison with lower-risk fixed income securities, which erodes their value proposition to income-seeking investors.

Figure 14: DPU vs Interest Rate

Source: Company Filings

Figure 16: Increase in AEI investment (2016-2018, in millions)

Source: Company Filings

Figure 17: Portfolio Allocation by Property Type

Source: Company Fillings

Historically, Ascendas has remained resilient throughout such periods, and its DPU growth actually has a tendency to outperform peers during rate hikes. We identified the key drivers to be (i) property acquisitions and (ii) asset enhancement initiatives which have propelled an increase in DPU that offsets the interest rate drag on the REIT's performance.

Accretive Acquisitions

Breaking down the strategies into further detail, in the period of 2004-2007, Ascendas had the greatest increase in asset value amongst its peers with a rise of 224% relative to peers that ranged from 127% to 185%. We would like to point out that this is the only peer comparison that differs from the standard set that we use for our analysis, as these are the only comparable REITs that existed in the chosen time period.

Ascendas is also poised to maintain this edge against peers with an above-median 1H22 acquisition record of S\$212.1m relative to peers with Mapletree Logistics at S\$145.7m, Mapletree Industrials at S\$1.32b and ESR-LOGOS at S\$0m. Moreover, despite this outperformance, Ascendas had the lowest gearing percentage of 36.7% relative to 37.2%, 38.4% and 40.6% respectively. This indicates that such performance is sustainable, and Ascendas would be able to leverage on this capacity to maintain or even boost its DPU growth.

Asset Enhancement Initiatives (AEIs)

As for AEI investment, Ascendas similarly ranked the highest amongst its peers in the period of 2016-2018 with an investment of S\$229.5m in comparison to peers with Mapletree Logistics at S\$170.0m, Mapletree Industrials at S\$77.0m and ESR-LOGOS at S\$14.7m.

Ascendas' redevelopment pipeline also remains well ahead of peers at end 1H22 with a value of S\$566.0m that outshines peers with Mapletree Logistics at S\$197.0m, Mapletree Industrials at S\$0m and ESR-LOGOS at S\$38.5m. Ascendas' leading position allows it to capitalize on this strength to boost its property value and by extension its DPU performance.

Hence, we believe that Ascendas can make use of both strategies in its arsenal to bring about attractive DPU growth relative to peers, and can serve as a strong defensive position during periods with high interest rates. Ultimately, whether interest rates are rising or falling does not seem to be the key determinant of REIT performance in the medium to long-term. This is especially so if rate hikes are brought about by inflationary activity and overall strength in the economy. As such, stronger REIT fundamentals and sound management have the potential to mitigate or even outweigh any negative impact caused by rising rates.

2. Ascendas' consumer base in rapidly developing industries increases income stability and potential for continued outperformance

Capitaland Ascendas REIT attributed 24.6% of net rental income generated for FY21 to biomedical and agriculture/aqua culture for the country. The life sciences and engineering space boom due to the tail-like increase in profits generated throughout the COVID-19 period helped facilitate the expansion of large firms such as Pfizer, Novartis, Sanofi, AbbVie and Amgen into Singapore. Singapore has been touted as a hot spot for biotechnology and pharmaceutical firms alike looking to develop new business units in the APAC region.

Future outperformance underpinned by high forecasted demand for biotechnology spaces in Singapore

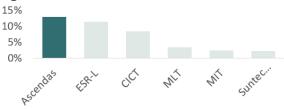

The Singaporean government is deeply committed to growing the country into a global hub for biotechnology seen by significantly increased investments through the Research, Innovation and

Course Company Eilings

Source: Company Filings

Enterprise (RIE) 2025 Plan to channel S\$25 billion into research and innovation. This represents a 32% increase compared to RIE2020 when the government committed S\$19 billion.

Strong governmental initiatives to shape the biomedical landscape further bolsters the increase in demand for high-specifications industrial and light industrial properties. The rise in desirability to base operations in Singapore is driven by the strong intellectual property protection laws and access to a global top talent pool. Companies in the industry prioritise the importance of safekeeping their key process drivers in the form of their technical knowledge and manufacturing know-how to ensure there is no unfair competition in the market when a new drug is developed for a limited time and reap the benefits of the company's research and development efforts.

Tenant-building metrics

Capitaland Ascendas REIT's focus on multi-tenant buildings and their relatively low WALEs of 3.4 and 3.3 years for high-specifications industrial and light industrial properties respectively creates outperformance opportunities via increased rentals upon lease renewals. In 1H2022, Ascendas enjoyed 13.0% in rental increases for lease renewals to be an industry leading player with ESR-L (11.4%), CICT (8.5%), MLT (3.5%) and Suntec REIT (2.3%). There is elevated confidence in the current and likely future landlord market to expect higher positive rental reversions as bargaining power of Capitaland Ascendas REIT skyrocket due to the tight supply and unprecedented heightened demand for these buildings.

3. Thesis 3: Reduction in equity financing due to smaller scale acquisitions and cheaper debt to prevent dilution of DPU

As REITs are mandated to give away 90% of total returns as dividends, they tend to keep small cash balances and require significant debt and equity financing for acquisitions. One drawback to equity financing would be the dilutive effect it has, where distributions are spread more thinly over a larger pool of shares. Tracking Ascendas REIT's Distributions per Unit (DPU) alongside commons stock growth rate hence shows an inverse correlation, with distributions increasing generally when common stock grows as a slower rate.

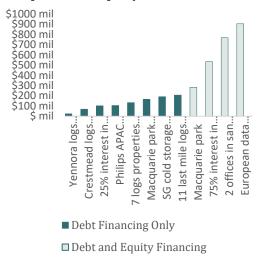

We hence believe that DPU for Ascendas will remain resilient in the near future, predicated on management guidance for smaller scale acquisitions, in conjunction with the REIT's lower cost of debt compared to industry peers.

Smaller-Scale Acquisitions

Given the current macroeconomic climate, large acquisitions that require a significant amount of time to complete would be unlikely, due to the fears of interest rate fluctuations throughout the acquisition process. This point is reiterated by management multiple times in the recent earnings call, with the REIT's strategy to be remaining active on the investment front, but will look to smaller acquisitions to fund inorganic growth.

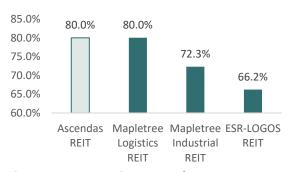

While a shift to smaller acquisitions may seem irrelevant, sorting the REIT's past acquisitions from 2020 to 2022, shows that acquisitions below the threshold of around S\$200 million were funded purely by debt, while those above that benchmark used a combination of debt and equity financing. Hence, this reduction in acquisition size would indicate a lower future reliance on equity financing. This would also be in line with a historical trend of decreasing growth rate of common stock, which has decreased on an average rate of 2% a year since the REIT's inception. The lower equity financing would therefore reduce the dilution of distributions, making DPU more resilient in the near future.

Credit Rating	ААА	BBB+	BBB+	NA

Source: Respective Company Filings

Figure 26: REIT Cost of Debts

Source: Respective Company Filings

Cheaper Debt Financing Compared to Peers

With a shift to more debt financing, the current high interest rates would seem detrimental for the REIT. However, Ascendas is better positioned than its peers, and hence will not be as affected by interest rate rises.

Comparing with other REITs with similar property types, Ascendas' 80% of borrowings on fixed rates provides the REIT with a significant hedge against interest rate fluctuations. Furthermore, their stellar credit rating of AAA compared to peers' BBB+ allows the REIT to enjoy a low cost of debt of 2.2%. In this tumultuous market where higher costs of debt makes it harder for REITs to find accretive acquisitions, Ascendas is uniquely positioned with a low cost of debt compared to peers, and a conservative gearing of 36.7% giving the REIT a significant debt headroom of \$\$4.6 billion.

This results in Ascendas REIT having the capacity to take out large amounts of debt in order to fund future acquisitions, as opposed to relying solely on equity financing. In a time where other REITs seek to use more equity financing, Ascendas is able to maintain a resilient DPU by focusing funding acquisitions through debt.

Catalysts

1. Acquisitions of new properties or joint venture partnerships with CapitaLand

Ascendas has a track record of acquiring properties from CapitaLand's property pipeline as well as joint venture partnerships for redevelopment initiatives. Additions to CapitaLand's portfolio (with CapitaLand's recent return to China investments) mean that Ascendas could potentially leverage on its sponsor to enter new markets and further diversify its portfolio.

2. Introduction of new AEI initiatives for properties with low occupancy rates

Ascendas has been very active in implementing AEI initiatives in an attempt to improve portfolio occupancy rate and command higher rental reversions. Assets with low occupancy rates such as its International Business park present unrealised opportunities for redevelopment which could enhance its performance metrics.

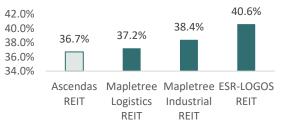

3. Positive macro-outlook to buttress landlord market

Optimistic and strong demand for e-commerce goods and services will create a consistent and strong demand for logistics buildings - those acquired in Chicago, United States and high-specialisation buildings in Singapore for FY22/23. Consequently, higher positive rental reversions will drive net operating income and capitalisation rates. Fundamental support in consumer spending will surpass analyst expectations to re-affirm shareholders' faith in CapitaLand Ascendas REIT portfolio and price in future expectations for additional potential out-performance.

4. Upcoming dividend declarations

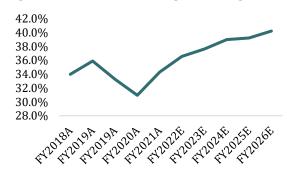

Ascendas REIT pays dividends semi-annually, with 2 distribution periods throughout the year. The upcoming announcement of 1H 2023 is likely to show growth in DPU due to the aforementioned reasons in the theses. This will serve as a strong catalyst to drive Ascendas REIT's share price higher.

Overview

The chart above reveals Ascendas REIT's financial prospects for the next 5 years, highlighting our assumptions. Most of the indicators yield positive and favourable trends that are supportive of our overall **BUY** recommendation.

Ascendas maintains its gearing headroom, despite increasing debt acquisitions

Ascendas' gearing is expected to increase from 34.3% in FY21 to 40.2% in FY26. This is in line with our thesis where the acquisitions and AEIs outlined by management are funded by debt. While this is the case, Ascendas is still able to maintain its debt headroom, with the gearing limit set by MAS at 50%. With this capacity to take on more debt, Ascendas can continue its acquisitions past FY26 without having to rely solely on equity financing.

Higher earnings per share and dividends per share

Both earnings per share as well as dividends per share increases from FY21 to FY26, indicative of accretive acquisitions to the REIT. While we forecast that the earnings per share and dividends per share will fall from FY25 to FY26, this due to a conservative assumption that Ascendas will increase the growth rate of its number of shares from 5.5% to 6.35% as the REIT slowly relies more on equity financing for acquisitions.

Stable profitability ratios

As costs scale proportionally to gross revenue, margins remain relatively stable, along with Return on Assets and Return on Invested Capital. However, Return on Equity increases from FY21 to FY26 given the use of lesser equity financing, combined with an increase in accretive acquisitions.

Valuation

Valuation Price Target: \$\$3.50

DDM model

A Dividend Discount Model was used to estimate Ascendas REIT's Share price, using a 5-year forecast due to the infeasibility of projecting acquisitions and AEIs over a longer period.

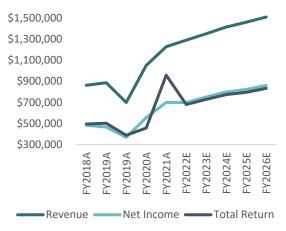

AEIs were projected to be in line with management guidance of \$\$566 million of properties under development, with our model forecasting the REIT hitting that target in 2023. Acquisitions were forecasted to

increase to a peak of S\$900 million in 2023. Both AEIs and acquisitions were forecasted to taper off to hedge against the uncertainty of the future.

For dividend distribution calculation it was assumed that the growth rate of the number of units were to decrease to 5.5% before increasing over time, in accordance of our thesis of reduced equity financing.

The total distributions available to unitholders was then obtained from revenue assumptions, and distribution adjustments were made in order to derive the total amount available for distribution. This was divided by projections for the number of units to obtain distribution per unit for the forecasted years.

Revenue projections

Due to the vast number of properties within Ascendas' portfolio, revenue was calculated by obtaining Valuation, Net Leasing Area (NLA) and Revenue averages for the different countries constituting the REIT's portfolio. This was used to obtain the Valuation per NLA and Revenue per NLA metrics for the different countries.

We also obtained the current portfolio weights for each country based on valuation. Using this we assumed that the increase in acquisitions in our thesis would be in line with the current portfolio weights. The increase in portfolio valuation in each country was used to obtain increases in NLA and hence increases in revenue using the Valuation per NLA and Revenue per NLA metrics.

Revenue growth

Ascendas REIT's historical revenue growth from FY12 to FY21 has been 10.8%. Given the current backdrop of high interest rates many analysts are expecting this growth rate to decrease as a result of fewer acquisitions. However, for reasons mentioned in the thesis, we are expecting Ascendas to hit the guidance provided by management in the form accretive acquisitions and increased AEIs, allowing strong top line growth despite macroeconomic pressures.

Cost of equity

CAPM was used to estimate the cost of equity. We obtained the risk free rate using the 10-year government bond yield from Singapore, Australia, the UK and the US, and used the STI, ASX300, FTSE and S&P500 as market returns for the respective countries. Beta for the REIT was taken from Yahoo Finance which stands at 0.44. The cost of equity was calculated for each region, was weighted based on the percentage of revenue in each geography to obtain a blended cost of equity of 5.4%.

Terminal growth

In the DDM, we discounted the historical dividend growth rate due to the uncertain macroeconomic environment, resulting in a terminal growth rate of 1.3% This was used in our calculation of terminal value.

In the DCF model, an EV/EBITDA multiple of 18.75x was used, which also represents a discount to the 5-year average EV/EBITDA multiple.

Yield spread analysis

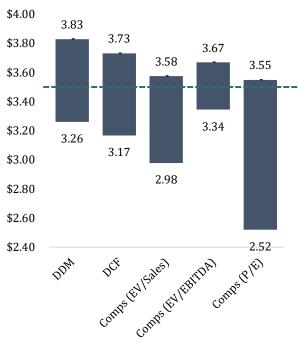

A yield spread analysis of Ascendas' dividend yield against that of the 10-year SGS yield was performed. Ascendas' current dividend yield is 5.6% vs the current SGS yield of 3.0%. The implies a current spread of 2.5% against a historical average of 2.8%. We expect a mean reversion with management commitment to financial prudence and healthy gearing.

Figure 37: Ascendas Comps Set

Figure 38: Ascendas Valuation Summary

Source: NUS Investment Society Estimates

Figure 39: Investment Risk Matrix

Source: NUS Investment Society Estimates

Relative valuation

We performed relative valuation as a sanity check to our DDM valuations. For industry peers, we found REITs listed on the SGX that had either logistics, industrial or business park properties, that were of adequate size of S\$3 billion market capitalization and above. This gave us a comps set that included Mapletree Logistics Trust (SGX:M44U), Mapletree Industrial Trust (SGX:ME8U) and ESR-LOGOS REIT (SGX:J91U). Our comparable metrics included EV/EBITDA, EV/Sales and P/E, along with DCF (exit multiple method). Our target price of S\$3.50 was validated as it fell between the 25th and 75th percentile for all valuation methods, representing a 36.7% upside. We hence are confident that this valuation reaffirms our BUY recommendation.

Investment Risks

Market Risk 1 (M1)

Challenging macroeconomic conditions to affect rapidly developing industries such as technology, biomedical, etc.

The United States is slated to combat rising inflation through interest rate hikes with the rest of the world likely following suit with similar monetary policy tightening across the central banks. The increased cost of debt may limit the ability to finance future acquisitions to boost portfolio return performance and depress bottom line figures. Nevertheless, 80% of borrowings are on fixed rates with an average term of 3.7 years. The strong sponsorship of CapitaLand will allow the company to enjoy lower borrowing costs and their fortress balance sheet will increase Ascendas' ability to stomach global uncertainty and volatility as compared to its peers.

Business Risk 2 (B2)

Sustained increase in electricity and production input costs:

Around 95% of electricity generated in Singapore uses liquid natural gas and the tight supply has led to an increase in utility costs for its properties – with 61% of portfolio assets in Singapore. Capitaland Ascendas REIT aims to power common facilities electricity usage at Nucleous with renewable energy in addition to existing 3 properties at one-north and SLE industrial building, Logistech. Additionally, the company has been awarded 18 Green Mark Certifications in 1H22 and are looking to adopt more green certifications with 3 pending including IQuest@IBP, Singapore through eco-friendly implementations.

Investment Risk 3 (I3)

Fluctuations in foreign exchange rates:

Given that 10% of their portfolio resides in the United Kingdom/Europe, England was set to increase the budget deficit and accelerate inflation. The market reacted negatively and raised interest rates to reduce future inflationary pressures which drove the pound down and reduced the valuations of the properties relative to the strength of the Singapore Dollar. Therefore, to avoid the erosion of rental income, Capitaland Ascendas REIT holds interest rate and cross currency swaps to lock in generated net rental income and prevent any loss to unexpected news.
